IT Coordinator
Web Developer
Network Administrator
Disaster Recovery Lead

As an IT Coordinator:

- * Work with other employees in the company to diagnose hardware and software issues.
- * Teach other employees in the company on how to use various software, such as Zoom, Excel, and Git.

As a Web Developer:

- * Deployed internal Gitlab server for company use.
- * Developed and automated deployment of a new intranet website to manage internal company resources.
- * Developed a REST API for serving sales and distribution data to manufacturers.

As a Network Administrator:

- * Setup, manage, and maintain multiple servers for the company.
- * Built and configured multiple servers from scratch for various department needs.
- * Diagnose and patch faulty server firmware and security vulnerabilities.
- * Diagnose and replace faulty server hardware.
- * Program and configure network devices such as Cisco wireless access points and Cisco firewalls.
- * Responsible for creating and managing various documentation regarding network administration tasks.

As a Disaster Recovery Lead:

- * Created a full-featured Disaster Recovery Plan, comprised of an 80 plus page document, detailing the efforts to be made in the event of a disaster.
- * Work to plan, setup, and manage the back-up schedule for all our network servers.
- * Conduct extensive testing, based on the disaster recovery documentation, to ensure any recovery processes go smoothly, and that we have good back-ups.
- * Act as part of the incident response team, should a disaster occur, to help recover normal network operations.
